

Script-Controlled ACL – Restrict Record Access Based on Field Value

3. Project Design Phase

Security Design

- Use ServiceNow Access Control Lists (ACLs) at record level.
- Use a READ ACL on u_institution_details to restrict records by Branch.
- Use role-based ACLs for CREATE, WRITE, and DELETE operations.

ACL Design

- READ: bb1 + Branch = EEE.
- CREATE: bb2.
- WRITE: bb3.
- DELETE: bb4.
- The READ ACL script allows admin and bb1 users and returns false otherwise.

Read ACL Script

```
(function () {  
  if (gs.hasRole('admin')) { return true; }  
  if (gs.hasRole('bb1')) { return true; }  
  return false;  
})();
```
