

Script-Controlled ACL – Restrict Record Access Based on Field Value

7. Project Documentation

Documented Configuration

- Record the user and role creation procedure.
- Document the Institution Details table name, fields, and Branch choices.
- Document the READ ACL settings, data condition, and script.
- Document the CREATE, WRITE, and DELETE ACL settings and required roles.

Documented Verification

- Record the expected behavior for each role combination.
- Document Admin access and restricted user access.
- Keep the milestone sequence and verification results together as the project record.

Project Outcome

- The lab demonstrates how script-controlled READ, WRITE, CREATE, and DELETE ACLs enforce record-level security.
- User roles and record field values are evaluated together to make access decisions.
- ACLs protect data from unauthorized viewing, modification, creation, and deletion.
