

Script-Controlled ACL – Restrict Record Access Based on Field Value

8. Project Demonstration

Demonstration Flow

- Open the ServiceNow instance with the required administrative access.
- Show the EEE User and the custom roles.
- Open the Institution Details table and display records with different Branch values.
- Open the Access Control (ACL) area and show the configured ACLs.

Access Demonstration

- Impersonate the EEE user and open the Student Records list.
- Show that the bb1 role user can view EEE branch records.
- Demonstrate the New button after the CREATE permission is available.
- Demonstrate editing after WRITE permission is available.
- Demonstrate deletion after DELETE permission is available.
- Impersonate Admin and show that Admin can view all records.

Final Demonstration Result

- The demonstration shows how roles and the Branch field work together to control record-level access.
